Bahaeddine Krifa

Full-Stack & DevOps Engineer

Sousse, Tunisia | +216 50 991 102 | bahaeddinekrifa@gmail.com
linkedin.com/in/bahaeddinekrifa | github.com/bahaeddine-krifa

PROFESSIONAL SUMMARY

Final-year software engineering student at the Polytechnic School of Sousse, seeking a 6-month end-of-studies internship (PFE). Full-stack developer (Angular, React, Spring Boot, Node.js) with a growing DevOps focus: containerization with Docker, CI/CD with GitHub Actions, infrastructure as code with Terraform and deployments on AWS. Hands-on experience integrating third-party APIs (Meta Graph API, Google Workspace) and building microservices (gRPC, GraphQL, Kafka). IEEE Student Branch Chair. Fast learner, available for new opportunities.

EDUCATION

Engineering Degree in Software Engineering
Polytechnic School of Sousse, Tunisia | Sep 2025 – Present (final year, expected graduation 2027)

Engineering Degree in Applied Computer Science (Year 1)
National Engineering School of Sousse (ENISo), Tunisia | Sep 2024 – Jun 2025

Bachelor's Degree in Information Technology (Web Development & Multimedia)
Higher Institute of Technological Studies of Sousse (ISET Sousse), Tunisia | Sep 2021 – Jun 2024

Baccalaureate in Technical Sciences
Sousse High School, Tunisia | Sep 2017 – Jun 2021

WORK EXPERIENCE

Python Programming Instructor — Opus Lab
Sousse, Tunisia | Jun 2025 – Oct 2026

- Teach Python and algorithmic problem-solving to high school students through structured, hands-on sessions.
- Cover core concepts (variables, control structures, loops, functions) and guide students through step-by-step algorithm design.
- Adapt content and pace to each group so students build small real-world programs using core Python only.

Full-Stack Developer (End-of-Studies Internship) — Medical Innovation Technology Company
Tunis, Tunisia | Jan 2024 – Jun 2024
"MITIA": candidate-tracking web platform centralizing Facebook, Messenger and Gmail communication for recruiters.

- Designed and developed a full-stack web platform (Angular, Spring Boot, MySQL) that unifies Facebook, Messenger and Gmail interactions in a single interface.
- Integrated the Facebook Graph API to publish offers, track post engagement (likes, comments, shares), reply to comments and chat with candidates via Messenger.
- Built the Gmail integration with Spring Boot Mail (SMTP/IMAP) to import emails by date, detect new candidates and send replies from the app.
- Connected the Google Sheets API (GCP service account) to import Google Forms candidate data, and stored messages, contacts and posts in a centralized MySQL database.
- Implemented candidate status tracking (from registration to acceptance or rejection), filterable candidate lists and role-based user management (Agent, Manager, Administrator).
- Structured the app with a layered MVC 3-tier backend (Controller/Service/Repository, JPA) and an MVVM Angular frontend; modeled it in UML and worked in Agile iterations.

Technologies: Spring Boot, Angular, TypeScript, MySQL, JPA/Spring Data, REST APIs, Facebook Graph API, Gmail (SMTP/IMAP), Google Sheets API, Google Cloud Platform, Maven, Postman, MVC, MVVM, UML, Agile

Full-Stack Developer — ICAR- SA
Sousse, Tunisia | Jan 2022 – Feb 2023

- Built a stock management web application (Spring Boot, Angular, MySQL, REST API) with a modular MVVM architecture to streamline inventory operations.
- Developed responsive interfaces with HTML, CSS, Bootstrap, Sass and JavaScript; designed and deployed the company's presentational website.

PROJECTS

AWS Cloud & DevOps — Multi-Environment Deployment
Personal Project | GitHub: docker-node-demo

- Designed an AWS infrastructure with separate Staging and Production environments, each running an independent deployment of a Node.js application.
- Automated infrastructure provisioning using Terraform, including EC2 instances and remote state management with Amazon S3.
- Containerized the application with Docker and implemented CI/CD workflows using GitHub Actions for automated validation, testing, and security checks.
- Integrated Trivy for infrastructure security scanning and configured Nginx + HTTPS (Let's Encrypt) for the production environment.
- Practiced container deployment and orchestration using Amazon ECS.

Technologies: AWS (EC2, ECS, S3), Terraform, Docker, GitHub Actions, CI/CD, Trivy, Nginx, Let's Encrypt, Linux, Bash

Smart Health Platform — Microservices Healthcare System
Team project | GitHub: smarthealth-platform

- Developed, as a team, a healthcare management platform split into 9 gRPC microservices (patients, doctors, appointments, medical records, payments, inventory, laboratory, notifications, alerts).
- Exposed the services through a Node.js API Gateway offering REST and GraphQL (Apollo Server), with event-driven communication over Apache Kafka (10 business topics).
- React, Tailwind CSS and Apollo Client frontend; the whole stack is containerized with Docker Compose.

Technologies: Node.js, gRPC, GraphQL, Apache Kafka, React, Tailwind CSS, SQLite, RxDB, Docker

ENISO-LEARNING — Educational Web Platform
2025 | GitHub: frontend · backend

- Developed a web platform for ENISo where teachers upload and manage course materials and students download resources and follow updates.
- Implemented real-time teacher–student chat with WebSocket and an AI chatbot assistant powered by the Google Gemini API.

Technologies: Angular, Angular Material, Spring Boot, MySQL, WebSocket, Google Gemini API

CERTIFICATES

freeCodeCamp Certifications
Front-End Development Libraries; JavaScript Algorithms and Data Structures; Responsive Web Design
Google UX Design Professional Certificate (Coursera)

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, PHP, C
Frontend: Angular, React.js, HTML, CSS, Sass, Bootstrap, Tailwind CSS, Material UI, jQuery, DOM
Backend: Spring Boot, Laravel, Symfony, Node.js, Express.js, REST APIs, GraphQL
Architecture & Messaging: Microservices, API Gateway, WebSocket, gRPC, Apache Kafka, MVC, MVVM
Mobile & Desktop: Flutter, Kotlin, JavaFX
Databases & BaaS: MySQL, PostgreSQL, SQLite, MongoDB, Firebase, Supabase
DevOps & Cloud: Docker, Terraform, CI/CD, GitHub Actions, AWS, Azure, Google Cloud Platform (GCP), Linux, Bash, Git
Monitoring & Security: Prometheus, Grafana, Trivy, SBOM
Tools & Practices: GitHub, Postman, Figma, IntelliJ IDEA, VS Code, MySQL Workbench, AI-assisted development (ChatGPT, Claude), UML, Agile
Embedded, AR/VR & Vision: ESP32, Arduino, STM32, Raspberry Pi, Vuforia, Unity, Leap Motion, Blender, OpenCV

LANGUAGES

English (Intermediate) | French (Excellent) | Arabic (Native)

LEADERSHIP

Chair — IEEE ENISO Student Branch

- Lead and coordinate the branch's volunteer members and activities.
- Plan and coordinate technical events for students, including **COPx 2.0** (event page).
